

MODULAR SPIRAL

Saves space, minimizes maintenance and has the capacity to change with client's business needs

CAPABILITIES

- Original low-tension design with added modularity allows you to add or remove sections as your business needs changes
- Circulating the center cylinder allows for smooth and seamless starts and stops that are perfect for products that tip easily – cereal and candy boxes, glass and plastic bottles, cans, bagged and wrapped products, cartons and totes will all run smoothly on our spirals
- Space-saving elevation, lowering and accumulation of product – while maximizing floor space
- Incline or decline in a clockwise or counterclockwise direction – customizable and designed to our customers' specifications
- Belt speeds up to 300 feet per minute – load and speed are product dependent
- Minimized maintenance with a chainless belt means less belt wear and no messy chain lubrication
- Low-tension accomplished by circulating the middle cylinder along with the belt allowing for greater throughput than high-tension spirals
- Designed with safety in mind – cylinder and tensioning motors easily accessible at floor level

HiMEC

CONVEYORS®

FEATURES

- Low-tension design
- Fully customizable
- Center cylinder rotation
- Space saver
- Minimal maintenance
- Increased speed
- Modular design
- Quiet

Let us show you how the new modular spiral can help with your production and manufacturing needs.

CUSTOMIZING AND FABRICATING QUALITY CONVEYOR SYSTEMS

HiMEC Conveyors has more than 25 years' experience designing, customizing and building conveyors for the food processing, dairy, medical, and OEM industries. We specialize in providing innovative design solutions for our customers' difficult product handling situations. Our specialty and sheet metal fabricators understand the need for durable, ergonomic, and easily maintained conveyors, decking and equipment. We offer competitive prices to ensure a quality return on your investment.

Part of Harris Companies since 2005, HiMEC Conveyors is able to draw on the company's financial strength as well as the resources and expertise of its offices located across the United States.

CONVEYORS

HiMEC Conveyors offers standard and customized conveyors to suit your needs. We establish strong lines of communication with our customers and work together as a team to ensure that we offer the right solutions for each unique product handling challenge.

DECKS & STAIRS

HiMEC Conveyors can provide your company with a variety of decking options. We construct our decking products using stainless steel, aluminum, carbon steel or other available composites. We offer ergonomic cleaning platforms for easy access to tanks and other machinery for the purpose of sanitation. In congested areas, HiMEC Conveyors will design crossovers constructed of aluminum, stainless steel or painted carbon steel to provide easier access to these hard-to-reach areas.

DESIGN & INSTALLATION

From installation to start-up, HiMEC Conveyors provides a seamless approach to your special engineering projects with our design-build process. As part of our focus on customer satisfaction, HiMEC Conveyors will move you into your new space and reconfigure floor plans to make sure everything fits. When you work with HiMEC Conveyors, we ensure operational efficiency, code compliance and provide you with the comprehensive documents you need.
